GANTRY CRANES

Hydromechanical
equipment operations
and maintenance

Gantry Cranes are lifting and moving equipment of dynamic load normally utilized for:

- Assembly and maintenance of main equipment utilized in pumping stations, hydroelectric power stations, water and sewer treatment stations, dams and irrigation projects;
- Moving of stop logs and fixed-wheel gates.

The Gantry Cranes are project in compliance with FEM rules. They can be adapted to any operational conditions under consultation.

For small capacities (up to 25t) we utilize trolleys with electrical or manual hoists; for great capacities (up to 100t) we utilize special winch, where we may detach the project of cars with reduced height, making possible the reduction of building height and saving in the civil works.

We also supply all range of electrical feeding of cars and Gantry Cranes.
